

## Packing

Standard packing for Nautronic scoreboards has been developed and optimized over the years.

The scoreboards are individually packed in a wooden frame with cardboard padding for transportation.

Inside the frame the scoreboard is provided with cardboard corners with polystyrene padding for higher protection during freight operations.

When packing several scoreboards for one recipient the individually packed scoreboards are put together with wooden boards on the ends to stabilize the consignment.

Please note: The Nautronic packing standards are applied for most of our scoreboards but variations may occur according to given circumstances.
